PROVENEYA & NAHIARA

Internship Completion Report

May - June 2026 / Full 2-Month Period

Intern

Mr. Aditya Singh / Reg. No. 12306214

Total stipend authorised for review **USD 700**

Lovely Professional University, Punjab, India

Report date: 30 June 2026

Executive Portfolio

A redesigned final delivery package for the completed two-month internship at AquaMundi.org, consolidating the objectives plan, Month 1 progress evidence, and final completion report into a premium supervisor-ready document.

2 months	22 deliverables	USD 700
1 May - 30 June 2026	All listed final objectives completed	Total stipend for review

Work was structured across two parallel blocks: Block 2 - Digital Chapter Sales System, representing immediate platform revenue infrastructure, and Block 3 - NahiaraOS, the AI interactive layer for the Nahiara universe. Month 1 delivered the core build and research foundation. Month 2 completed production optimisation, AI iteration, contextual integration, and final technical documentation.

Block 2 / Digital Chapter Sales System

Revenue infrastructure delivered 100%

Sequential chapter unlock logic, international payment gateway, personal user library, audio player, encrypted offline download, production deployment, optimisation, and technical documentation.

Block 3 / NahiaraOS AI Layer

AI interactive layer delivered 100%

Model research, Araihan prompt system, canonical boundaries, multilingual coherence testing, functional prototype, supervisor iteration, contextual reading integration, and NahiaraOS v0.2 documentation.

Candidate & Programme Record

Intern	Mr. Aditya Singh	**Registration**	12306214
Academic institution	Lovely Professional University, Punjab, India	**Period**	1 May - 30 June 2026
Supervisor	Matias Octavio Gonzalez Gonzalez	**Role**	Secretary & Project Director
Organisation	Asociacion Internacional en Defensa de las Flores	**Platform**	AquaMundi.org
Stipend	USD 350/month	**Final amount**	USD 700

Completion Narrative

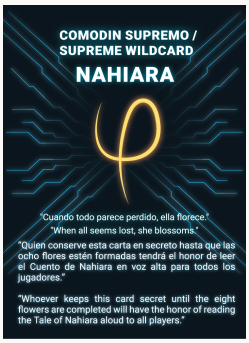
This final report records successful completion of the full two-month internship. The work met the planned distribution of 60% daily effort for Block 2 and 40% daily effort for Block 3. By the end of June 2026, both blocks were marked delivered in the final source report, with all 22 listed deliverables completed.

Source Documents Read

1	Internship Objectives Plan	May - June 2026	Plan baseline
2	Internship Progress Report	Month 1 - May 2026	Progress evidence
3	Internship Completion Report	May - June 2026	Final delivery evidence
4	Premium Completion Report	May - June 2026	Architecture, QA, impact, and video structure

AquaMundi Website Alignment

The final report has been aligned to the live AquaMundi website codebase at C:\Code\Aquamundi\custom_threejs_model. The delivery narrative now reflects the actual platform surface: interactive globe, shop, cart, digital downloads, currency detection, game flow, Araihan guide, multilingual localisation, and PWA-style asset handling.



Commerce Surface

The website includes a shop, cart, geolocation-based currency handling, physical products, and digital download purchase paths. This directly supports the Block 2 chapter-sales framing.

Interactive Universe

The homepage and game flow include 3D globe, flower-country collections, pollinator/game mechanics, and immersive branded assets.

AI Character Layer

The game flow references Araihan guide interactions, matching the NahiaraOS/Araihan character-system work described in Block 3.

Platform Evidence Integrated

+ Homepage uses lazy-loaded 3D globe, branded navigation, music toggle, gallery, and bento sections.

+ Shop page includes Nahiara Collection positioning, digital download actions, secure payment messaging, add-to-cart tracking, and currency detection.

+ Game page includes AraihanGuide, flower formation, country data, pollinator quiz, victory screen, game persistence, audio, and share flows.

+ Global styling uses floral patterns, light theme, custom animations, and green botanical UI accents.

Architecture & Quality Model

The expanded source report frames the internship as a professional delivery package, not only a list of completed tasks. The strongest material added here is the system architecture, entitlement logic, testing model, and implementation-risk handling.

Commerce Architecture

Purchase records, chapter states, pricing options, payment references, and entitlement updates are treated as connected but distinct responsibilities. That separation reduces ambiguity after payment and protects user trust.

Access & Offline Control

The reader journey moves from discovery to purchase, confirmation, chapter unlock, library ownership, audio playback, and encrypted offline PWA access instead of uncontrolled file exposure.

Quality Assurance

Testing covers successful purchase, failed/cancelled payment states, sequential lock rules, audio availability, offline package behaviour, user-library consistency, and documentation handover.

Risk Handling Added From Source Material

Risk	Why it matters	Handling
Incorrect paid access	Affects revenue and user confidence	Separate payment state from entitlement update
Confusing unlock flow	Readers must understand locked, owned, and bundled content	Use clear sequential unlock and library status
AI canon drift	A generic chatbot can contradict the story universe	Layer prompts by identity, Araihan voice, canon, scenarios, language, and safety
Handover gap	Supervisor and future maintainers need evidence	Use reports, diagrams, deliverables matrix, QA notes, and walkthrough plan

Impact, Learning & Walkthrough

The additional premium report also strengthens the final package with value framing, professional learning outcomes, and a video walkthrough structure suitable for academic review.

Business Value

Block 2 turns AquaMundi.org into a monetisable digital product through paid chapter access, library ownership, audio, and offline reading. Block 3 gives the platform a differentiated AI storytelling layer.

Professional Growth

The work demonstrates full-stack product thinking, payment-oriented architecture, PWA experience design, AI model evaluation, prompt engineering, documentation discipline, and remote collaboration.

Walkthrough Plan

A review video can follow: introduction, project context, Block 2 demo, Block 3 demo, implementation challenges, learning outcomes, and closing thanks.

Suggested Review Video Flow

Intro — Project Context — Block 2 Demo — Block 3 Demo — Learning Close

+ Keep the video evidence-based: problem, implementation, result, and learning.
+ Show the chapter-sales path as a commercial feature, not just a technical exercise.
+ Explain NahiaraOS as a controlled Araihan character system with multilingual and canonical boundaries.
+ Close by connecting the USD 700 stipend period to the final deliverables and handover package.

Latest Website Git Changes

Current uncommitted website changes from C:\Code\Aquamundi\custom_threejs_model were reviewed and added as live platform context. These changes are not staged or altered by this PDF generator; they are included here as supporting evidence of the AquaMundi delivery surface.

Changed area	Files	Report relevance
Hero CTA	components/HeroSection.jsx	Adds a visible Dia de Todos los Polinizadores link from the main hero, strengthening event discovery and public engagement.
S3 upload utility	app/upload-file-to-s3/page.js; app/actions/upload.js	Adds a hidden operational uploader for GLB models, images, documents, audio, and video with public URLs and GLB proxy snippets.
AWS SDK support	package.json; package-lock.json	Adds @aws-sdk/client-s3 and @aws-sdk/s3-request-presigner for presigned uploads.

Pollinators Event CTA

The hero now includes a rounded, animated external link to the pollinators countdown/event route, making the live event surface more discoverable from AquaMundi.org.

Operational Asset Pipeline

The upload utility supports heavier runtime assets such as GLB models and media files in S3, reducing pressure on the Vercel public folder and supporting Three.js workflows.

Delivery Timeline

Week 1

1-9 May

Architecture, pricing model, account integration, AI model research, and recommendation report.

Week 2

10-16 May

Payment gateway, personal library, Araihan base prompt system, and canonical boundary design.

Week 3

17-23 May

Audio player, encrypted PWA offline download, initial NahiaraOS chat prototype, and multilingual coherence tests.

Week 4

24-31 May

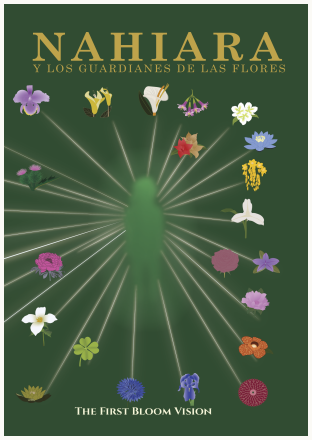
System testing, corrections, Month 1 technical report, supervisor prototype review, and NahiaraOS v0.1 architecture documentation.

June

Month 2

Production deployment, live monitoring, UX refinements, gateway optimisation, prompt expansion, contextual integration, and NahiaraOS v0.2 delivery.

Block 2 / Digital Chapter Sales System



Final status: delivered

The digital chapter sales system was developed as an immediate-impact revenue layer for AquaMundi.org. The final report confirms Month 1 core delivery and Month 2 production hardening, optimisation, and documentation.

+ Chapter purchase architecture: database schema, user flow, and sequential unlock logic.

+ Pricing model covering individual chapter purchases, cumulative discounts, and full-access bundles.

+ International payment gateway and personal user library with purchase history and access management.

+ Integrated audio player, encrypted PWA offline download, production deployment, live monitoring, UX refinement, and complete technical documentation.

Area	May core build	June finalisation
Commerce	Architecture, pricing, payment module	Gateway optimisation and edge-case resolution
Access	Sequential unlock and personal library	Production monitoring and UX refinements
Media/PWA	Audio player and encrypted offline download	Reliability and device compatibility improvements
Documentation	Month 1 technical report	Complete architecture, API, and deployment package

Block 3 / NahiaraOS AI Interactive Layer

NahiaraOS was the strategic AI layer of the internship, focused on a controlled interactive system for the AquaMundi.org platform and the Nahiara narrative universe. The final report confirms completion of the research foundation, prototype, multilingual testing, supervisor iteration, contextual chapter integration, and v0.2 documentation.

Research

OpenAI, Google Gemini, and Anthropic Claude were compared for cost, multilingual capabilities, and narrative adaptability.

Character System

A base prompt system defined Araihan's behaviour, communication style, permitted topics, and canonical boundaries.

Prototype

A guided chat interface was built, evaluated with the supervisor, refined, and extended through NahiaraOS v0.2.

Final AI Deliverables

+ AI model comparative study and reasoned recommendation report.

+ Base prompt system for Araihan and documented narrative/canonical limits.

+ Initial functional prototype inside AquaMundi.org with guided, controlled responses.

+ Multilingual coherence testing across Spanish, English, and German.

+ Supervisor feedback iteration, expanded prompt scenarios, contextual AI access from the reading experience, and NahiaraOS v0.2 documentation.

Complete Deliverables Matrix

#	Deliverable	Block	Month	Status
1	Chapter sales architecture and database design	Block 2	May	Completed
2	Pricing model: individual, cumulative, full access	Block 2	May	Completed
3	International payment gateway module	Block 2	May	Completed
4	Personal user library: purchase history and access	Block 2	May	Completed
5	Integrated per-chapter audio player	Block 2	May	Completed
6	Encrypted offline download in PWA	Block 2	May	Completed
7	Full system testing and Month 1 technical report	Block 2	May	Completed
8	Production deployment and live monitoring	Block 2	June	Completed
9	UX refinements from production data	Block 2	June	Completed
10	System optimisation and edge case resolution	Block 2	June	Completed
11	Complete Block 2 technical documentation	Block 2	June	Completed
12	AI model comparative study	Block 3	May	Completed
13	AI solution recommendation report	Block 3	May	Completed
14	Base prompt system: Araihan	Block 3	May	Completed
15	Narrative and canonical boundary documentation	Block 3	May	Completed
16	NahiaraOS v0.1 functional prototype	Block 3	May	Completed
17	Multilingual coherence tests: ES / EN / DE	Block 3	May	Completed
18	NahiaraOS v0.1 architecture documentation	Block 3	May	Completed
19	Prototype iteration from supervisor feedback	Block 3	June	Completed
20	Expanded prompt system with new scenarios	Block 3	June	Completed
21	Block 2 + Block 3 contextual AI integration	Block 3	June	Completed
22	NahiaraOS v0.2 and complete technical documentation	Block 3	June	Completed

Final Evaluation & Authorisation

Supervisor Review Statement

This final report is submitted to Mr. Matias Octavio Gonzalez Gonzalez for final review and evaluation covering the complete internship period from 1 May to 30 June 2026, in accordance with Section 5 of the Internship Objectives Plan signed on 29 April 2026.

All objectives across both blocks and both months are recorded as fully delivered in the final source report. Upon satisfactory evaluation, the total stipend of USD 700 is requested to be authorised, with the Month 2 payment of USD 350 pending release.
